

Arvinas to Present at the 17th Annual Needham Healthcare Conference

March 20, 2018

NEW HAVEN, CT, March 20, 2018 – Arvinas LLC, a private biotechnology company creating a new class of drugs based on protein degradation, today announced that John Houston, Ph.D., President and Chief Executive Officer of Arvinas, will present a company overview at the 17th Annual Needham Healthcare Conference on Tuesday, March 27, 2018 at 8:30 a.m. ET in New York, NY.

About Arvinas

Arvinas is a pharmaceutical company focused on developing new small molecules – known as PROTACs (PROteolysis TArgeting Chimeras) – aimed at degrading disease-causing cellular proteins via proteolysis. Based on innovative research conducted at Yale University by Dr. Craig Crews, Founder and Chief Scientific Advisor, the company is translating natural protein degradation approaches into novel drugs for the treatment of cancer and other diseases. The proprietary PROTAC-based drug paradigm induces protein degradation, rather than protein inhibition, using the ubiquitin proteasome system and offers the advantage of potentially targeting “undruggable” as well as “druggable” elements of the proteome. This greatly expands the ability to create drugs for many new, previously unapproachable targets. For more information, visit www.arvinas.com.
