

## Arvinas Reports First Quarter 2022 Financial Results and Provides Corporate Update

May 5, 2022

NEW HAVEN, Conn., May 05, 2022 (GLOBE NEWSWIRE) -- Arvinas, Inc. (Nasdaq: ARVN), a clinical-stage biotechnology company creating a new class of drugs based on targeted protein degradation, today reported financial results for the first quarter ended March 31, 2022 and provided a corporate update.

"It has been a very productive first quarter for Arvinas, as we prepare to initiate three planned pivotal clinical studies in the second half of 2022 for our two lead programs – ARV-471 in metastatic breast cancer and bavdegalutamide in molecularly defined metastatic castration-resistant prostate cancer," said John Houston, Ph.D., chief executive officer and president at Arvinas. "We have a unique opportunity to bring these two programs into late-stage development at the same time, demonstrating the potential of our PROTAC® platform to selectively and efficiently degrade and remove disease-causing proteins."

### Business Highlights and Recent Developments

- In February, Arvinas presented completed Phase 1 dose escalation data and interim data from the ongoing Phase 2 ARDENT expansion cohort with bavdegalutamide in metastatic castration-resistant prostate cancer (mCRPC) at the American Society of Clinical Oncology Genitourinary Cancers Symposium (ASCO GU), that showed:
  - A PSA<sub>50</sub> rate (reduced prostate-specific antigen (PSA) levels greater than or equal to 50%) of 46% in patients with AR T878X/H875Y (T878X = T878A or T878S) tumor mutations (n=28)
  - Two durable, confirmed RECIST (Response Evaluation Criteria in Solid Tumors) partial responses (out of seven RECIST-evaluable patients with AR T878X/H875Y tumor mutations)
  - Bavdegalutamide had a manageable tolerability profile at the recommended Phase 2 dose (RP2D) of 420 mg oral, once daily
  - PSA reductions and evidence of anti-tumor activity as measured by RECIST were observed across all subgroups regardless of mutation status, including in patients with tumors not harboring AR T878X/875Y mutations

### Anticipated 2022 Milestones and Expectations

#### ARV-471

- Present data from the VERITAC Phase 2 expansion trial (200 mg and 500 mg) (2H 2022)
- Present safety data from the Phase 1b combination trial with palbociclib (2H 2022)
- Initiate two Phase 3 trials in patients with metastatic breast cancer (as monotherapy and in combination) (2H 2022)
- Initiate a Phase 1b combination trial with cyclin dependent kinase (CDK) inhibitors or other targeted therapies (2H 2022)
- Initiate a Phase 1b combination trial with everolimus (2H 2022)
- Initiate a Phase 2 neoadjuvant trial in patients with early breast cancer (2H 2022)

#### Bavdegalutamide (ARV-110)

- Discuss the potential accelerated approval path with the Food and Drug Administration (FDA) (Q2 2022)
- Finalize partnership for a companion diagnostic (Q2 2022)
- Initiate a pivotal trial in mCRPC for patients with AR T878/H875 tumor mutations (2H 2022)

#### ARV-766

- Share Phase 1 dose escalation data in mCRPC (2H 2022)
- Initiate Phase 2 expansion trial in mCRPC (2H 2022)

### First Quarter Financial Results

**Cash, Cash Equivalents, Restricted Cash and Marketable Securities Position:** As of March 31, 2022, cash, cash equivalents, restricted cash and marketable securities were \$1,432.9 million as compared with \$1,507.1 million as of December 31, 2021. The decrease in cash, cash equivalents, restricted cash and marketable securities of \$74.2 million for the first three months of 2022 was primarily related to cash used in operating activities of \$60.5 million (net of \$6.5 million received from two collaborators), unrealized loss on marketable securities of \$14.1 million, and the purchase of lab equipment and leasehold improvements of \$2.1 million, partially offset by proceeds from the exercise of stock options of \$2.5 million.

**Research and Development Expenses:** Research and development expenses were \$64.0 million for the quarter ended March 31, 2022, as compared with \$34.9 million for the quarter ended March 31, 2021. The increase in research and development expenses of \$29.1 million for the quarter was primarily due to an increase in our continued investment in our platform and exploratory programs of \$11.0 million, as well as an increase in expenses related to our AR program (which includes bavdegalutamide and ARV-766) of \$8.9 million and our ER program of \$9.2 million, which is net of the cost sharing of ARV-471 under the global Pfizer collaboration agreement to develop and commercialize ARV-471 that was initiated in July

2021 (ARV-471 Collaboration Agreement).

**General and Administrative Expenses:** General and administrative expenses were \$20.2 million for the quarter ended March 31, 2022, as compared with \$12.3 million for the quarter ended March 31, 2021. The increase of \$7.9 million was primarily due to an increase in personnel and facility related costs of \$5.5 million and insurance and professional fees of \$2.4 million.

**Revenues:** Revenues were \$24.2 million for the quarter ended March 31, 2022, as compared with \$5.5 million for the quarter ended March 31, 2021. Revenue is related to the ARV-471 Collaboration Agreement, the license and rights to technology fees and research and development activities related to the collaboration and license agreement with Bayer that was initiated in July 2019, the collaboration and license agreement with Pfizer that was initiated in January 2018, and the amended and restated option, license and collaboration agreement with Genentech that was initiated in November 2017. The increase in revenues of \$18.7 million was due to revenue from the ARV-471 Collaboration Agreement.

**Income Tax Expense:** Income tax expense was \$4.5 million for the quarter ended March 31, 2022, as compared with zero for the quarter ended March 31, 2021, due to taxable income projected for fiscal year 2022 primarily related to revenue recognized in 2022 for tax purposes from the ARV-471 Collaboration Agreement.

**Net Loss:** Net loss was \$63.4 million for the quarter ended March 31, 2022, as compared with \$41.0 million for the quarter ended March 31, 2021. The increase in net loss for the quarter was primarily due to increased research and development expenses, general and administrative expenses, and income tax expense, partially offset by increased revenue.

#### **About bavdegalutamide (ARV-110)**

Bavdegalutamide (ARV-110) is an investigational orally bioavailable PROTAC® protein degrader designed to selectively target and degrade the androgen receptor (AR). Bavdegalutamide is being developed as a potential treatment for men with metastatic castration-resistant prostate cancer.

Bavdegalutamide has demonstrated activity in preclinical models of AR mutation or overexpression, both common mechanisms of resistance to currently available AR-targeted therapies.

#### **About ARV-471**

ARV-471 is an investigational orally bioavailable PROTAC® protein degrader designed to specifically target and degrade the estrogen receptor (ER) for the treatment of patients with locally advanced or metastatic ER+/HER2- breast cancer.

In preclinical studies, ARV-471 demonstrated near-complete ER degradation in tumor cells, induced robust tumor shrinkage when dosed as a single agent in multiple ER-driven xenograft models, and showed superior anti-tumor activity when compared to a standard of care agent, fulvestrant, both as a single agent and in combination with a CDK4/6 inhibitor. In July 2021, Arvinas announced a global collaboration with Pfizer for the co-development and co-commercialization of ARV-471; Arvinas and Pfizer will equally share worldwide development costs, commercialization expenses, and profits.

#### **About ARV-766**

ARV-766 is an investigational orally bioavailable PROTAC® protein degrader designed to selectively target and degrade AR. In preclinical studies, ARV-766 degraded all resistance-driving point mutations of AR, including L702H, a mutation associated with treatment with abiraterone and other AR-pathway therapies.

ARV-766 is being developed as a potential treatment for men with metastatic castration-resistant prostate cancer, and ARV-766 may also have applicability in other AR-driven diseases both in and outside oncology. ARV-766 has demonstrated activity in preclinical models of resistance to currently available AR-targeted therapies.

#### **About Arvinas**

Arvinas is a clinical-stage biotechnology company dedicated to improving the lives of patients suffering from debilitating and life-threatening diseases through the discovery, development, and commercialization of therapies that degrade disease-causing proteins. Arvinas uses its proprietary PROTAC® Discovery Engine platform to engineer proteolysis targeting chimeras, or PROTAC® targeted protein degraders, that are designed to harness the body's own natural protein disposal system to selectively and efficiently degrade and remove disease-causing proteins. In addition to its robust preclinical pipeline of PROTAC® protein degraders against validated and "undruggable" targets, the company has three clinical-stage programs: bavdegalutamide and ARV-766 for the treatment of men with metastatic castration-resistant prostate cancer; and ARV-471 for the treatment of patients with locally advanced or metastatic ER+/HER2- breast cancer. For more information, visit [www.arvinas.com](http://www.arvinas.com).

#### **Forward-Looking Statements**

This press release contains forward-looking statements that involve substantial risks and uncertainties, including statements regarding the potential benefits of the Pfizer collaboration and the potential advantages and therapeutic benefits of ARV-471, bavdegalutamide, ARV-766 and our other product candidates, the future development and potential marketing approval and commercialization of ARV-471, bavdegalutamide, ARV-766 and our other product candidates, including the initiation of and timing of data from our clinical trials. All statements, other than statements of historical facts, contained in this press release, including statements regarding our strategy, future operations, prospects, plans and objectives of management, are forward-looking statements. The words "anticipate," "believe," "estimate," "expect," "intend," "may," "might," "plan," "predict," "project," "target," "potential," "will," "would," "could," "should," "continue," and similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words.

We may not actually achieve the plans, intentions or expectations disclosed in our forward-looking statements, and you should not place undue reliance on our forward-looking statements. Actual results or events could differ materially from the plans, intentions and expectations disclosed in the forward-looking statements we make as a result of various risks and uncertainties, including but not limited to: each party's performance of its obligations under the Pfizer collaboration, whether we and, as applicable, Pfizer will be able to successfully conduct and complete clinical development, including whether we initiate and receive results from our clinical trials on our expected timelines or at all, obtain marketing approval for and commercialize ARV-471, bavdegalutamide, ARV-766 and our other product candidates on our current timelines or at all and other important factors discussed in the "Risk Factors" sections contained in our quarterly and annual reports on file with the Securities and Exchange Commission. The forward-looking statements contained in this press release reflect our current views with respect to future events, and we assume no obligation to update any forward-looking statements except as required by applicable law. These forward-looking statements should not be relied upon as representing our views as of any date subsequent to the date of this release.
